Lightning

Check

Gas

One product for everything environmental on a site. **Weather Station, Lightning and Gas** are in it today, on one platform with one menu and header. Each project switches on only the products it uses. Going forward, new environment products go under it (direction, no dates).

Weather Station

Danger

▲ Danger Unsafe conditions One or more readings indicate a danger-level condition. Act on the

Weather parameters

Heat Index

49.5 °C

▲ Danger

- A verdict, in words, and the steps to take, in priority order.
- A heat card with work, rest and water. Offline stations are named.
- Reports, and a Site Safety Policy with 30 day charts.

Lightning

All Clear

All Clear

Normal operations.

Safe to work

- A backup: the site's cabinet lights and sounder come first.
- Only green is safe to work. Alert distances on a map.
- Alarm history with CSV export. Wallboard and phone views.

Gas

Check

⚠ CHECK

Not confirmed safe: 1 detector not reporting. Resolve the items listed before relying on this reading. Last reading 18 min ago · 4 of 5 detectors reporting

- Overview, detectors and compliance limits.
- A silent detector is named, and the status reads Check.
- Acknowledge and close alerts: recorded in WakeCap only.

One platform behind them. Each project switches on only what it uses (Settings, Connected Products).

Good to know

- **Lightning is a backup**, not the alarm. Cabinet lights and sounder first.
- **Gas acknowledge and close** are recorded in WakeCap only, not sent to the gas vendor.
- **Gas exposure and compliance figures**: Not available yet.
- **The AI assistant** is direction only. No assistant runs on any site.
- **Trends** is in the menu marked Planned.

Find it, and watch

In the portal's left rail, click the **sun-and-cloud icon**: Connected Environment, if your project has it. Read the top line first.
